exceptional deeply researched and elegantly written as a description of the politics and pressures under which modern independent central banking has to operate the book is incomparable financial times the definitive biography of the most important economic statesman of our time from the bestselling author of the power law and more money than god sebastian mallaby s magisterial biography of alan greenspan the product of over five years of research based on untrammelled access to his subject and his closest professional and personal intimates brings into vivid focus the mysterious point where the government and the economy meet to understand greenspan s story is to see the economic and political landscape of our time and the presidency from reagan to george w bush in a whole new light as the most influential economic statesman of his age greenspan spent a lifetime grappling with a momentous shift the transformation of finance from the fixed and regulated system of the post war era to the free for all of the past quarter century the story of greenspan is also the story of the making of modern finance for good and for ill greenspan s life is a quintessential american success story raised by a single mother in the jewish émigré community of washington heights he was a math prodigy who found a niche as a stats crunching consultant a master at explaining the economic weather to captains of industry he translated that skill into advising richard nixon in his 1968 campaign this led to a perch on the white house council of economic advisers and then to a dazzling array of business and government roles from which the path to the fed was relatively clear a fire breathing libertarian and disciple of ayn rand in his youth who once called the fed s creation a historic mistake mallaby shows how

greenspan reinvented himself as a pragmatist once in power in his analysis and in his core mission of keeping inflation in check he was a maestro indeed and hailed as such at his retirement in 2006 he was lauded as the age's necessary man the veritable god in the machine the global economy's avatar his memoirs sold for record sums to publishers around the world but then came 2008 mallaby's story lands with both feet on the great crash which did so much to damage alan greenspan's reputation mallaby argues that the conventional wisdom is off base greenspan wasn't a naïve ideologue who believed greater regulation was unnecessary he had pressed for greater regulation of some key areas of finance over the years and had gotten nowhere to argue that he didn't know the risks in irrational markets is to miss the point he knew more than almost anyone the question is why he didn't act and whether anyone else could or would have a close reading of greenspan's life provides fascinating answers to these questions answers whose lessons we would do well to heed because perhaps mallaby's greatest lesson is that economic statesmanship like political statesmanship is the art of the possible the man who knew is a searching reckoning with what exactly comprised the art and the possible in the career of alan greenspan
